## Introduction

### What is Final Fantasy?

Final Fantasy is a massive franchise owned by Square-Enix Ltd. It started out as a video game derivative of Dungeons & Dragons, with four Warriors of Light fighting against Chaos in order to save the world. It has since developed and encompassed just about every possible hero-saves-the-world plot possible. Each full Final Fantasy game is its own universe, such that there is no plotline continuity between games, although there are numerous common trappings and other elements. Some games have become franchises in themselves with their own sequels, with the biggest sub-franchise being Final Fantasy VII, and the highest-budget sub-franchise being Final Fantasy XV.

If FF P&P is your first encounter with this grand multiverse, worry not. Start with what you have in front of you. Get adjusted to your gaming group, and adapt to the setting that is put forth by your Game Master.

### Not All About Combat

The term “role-playing game” is often interpreted to mean a game of combat. Some time must be spent managing numbers in order to fare better at combat, as opposed to being purely about skill within the combat situations. Many of them happen to be about knights and soldiers, who then proceed to engage in a lot of combat as befits their jobs.

But in reality, role-playing games are about playing any kind of role. Imagine a game where one person pretends to be an average person on the street, and the other person pretends to be a salesman giving a pitch - that is just as much of a role-playing game.

### Improvised Acting

Role-playing games are more fun when you are able to get into your role and explore what it is like to be someone else. Although there can be a considerable number of rules, they do not determine what situations you will actually face. You must endure all sorts of things never seen before, things conjured by the imagination of others, and react just as your role would.

### True Choices & Consequences

Video games must have all their choices & consequences pre-written. Even when attempting procedural generation, the possible traits must still be pre-written.

With role-playing games, however, anything can happen. True consequences and reactivity are possible, since you are dealing with other people playing their roles, rather than with some pre-built system. If you have played your role as a pure paragon, then you can ensure that the ending of the game reflects this, and possibly even convince your enemies that they are wrong and ought to cease their harmful actions. Likewise, if you have played your role as a pure renegade, then perhaps there is a way to

destroy your bitter enemy through your own ingenuity, rather than resorting to contrived plot devices. You do not have to accept that the game simply ends with one of three choices, each of which causes different-colored explosions.

## All Rules are Optional

Each group of people finds that different rules suit their needs and personalities the best. It is natural, and even encouraged, that each gaming group would therefore add, remove, and change rules.

Any changes that are considered to be just plain better, rather than a matter of taste, should be discussed on the official Discord. If there is great favor towards the changes, then they will be adopted as official.

## Differences to other Final Fantasy-inspired Pen & Paper Games:

This is not the first attempt to write a role-playing game based on the Final Fantasy franchise, nor will it be the last. In fact it is quite good for hobbyist scenes when more people get into them and make their own take, so that everyone in the scene can learn from each other and change their own ideas of perfection. Considering how large the franchise is, it would be more worrying if people somehow did *not* have varying opinions.

The key points of difference are listed below:

- The number scale of the Final Fantasy video games, rather than the Seiken Densetsu or Chrono Trigger games. Why settle for 999 HP when you can have 99,999 HP! This does, however, cause removal of dice rolling in most other aspects of the game.
- The Job system is taken primarily from games that have changeable jobs and dresspheres. This means there will be weaker starting jobs and stronger unlockable jobs. The late game purposely involves powerful combinations of abilities.
- No skill system. Instead, relevant Job levels are used for skill checks.
- Maximalist approach. Inclusion of jobs and abilities is preferred compared to exclusion.

## Player Characters

### Character Creation Process

1. Write the Three Things about your character.
2. Experience Level = 1
3. Battle Attributes, starting with 100 Battle Attribute Points
4. Civil Stats & Combat Stats
5. Initiative Roll
6. Special Traits
7. Starting Civilian Jobs - Choose two different Civilian Jobs to start at Job Level 10.
8. Starting Combat Jobs - Chemist, Freelancer and Squire start at Job Level 1. Then, choose either Chemist or Squire to start at 10 instead.
9. Starting Items and Equipment
10. Starting flexible JP - 10 JP, to be spent between Chemist, Freelancer and Squire.

### Three Things

Write three things that make your character unique. They can encompass personal history, relation to the world, physical appearance, or anything else that sets your character apart.

Examples of things to write about your character:

- “He washed up on a beach with no memories.”
- “Her home was invaded by the Evil Empire, and her brother went missing.”
- “He fell into a cave and heard a voice telling him to save the world.”
- “He doubts the motives of his king.”
- “She is a woman who dresses as a man to maintain the respect of her peers. Such is the environment she survives in.”
- “She was enslaved by an insane magical clown, until a traumatic event freed her.”
- “The last thing he remembers is being a member of an elite organization and trying to stop an insane sword-wielding maniac.”
- “She guards the princess with her life, as is her ordained duty.”
- “After a failed relationship, she decides to see if her ex-boyfriend’s rival is a decent man.”
- “Her home environment was far too stifling and controlling, so she escaped.”
- “He was attacked by a flying gigantic creature that sent him into another world.”
- “She got fed up with lacking a White Mage for her party, so she decided to learn how to become one.”
- “He willingly took the blame for the assassination of the king, believing this would avert an even worse war. The real assassin was someone close to him.”
- “Her sister was kidnapped for some purpose known only to the gods.”
- “She heard the soul of the planet calling out to her to hear, feel, and think.”
- “He is the heir to the throne, yet the evil empire threatens to destroy his homeland.”

## Experience Level

Experience Level (LVL) is a significant factor in many calculations. As a general rule, Player Characters gain one, two or three Experience Levels (LVL) per game session, depending on the pace desired by the group.

## Battle Attributes

Battle Attribute	Explanation
<b>Strength</b>	damage for most melee weapons, helps reduce equipment weight
<b>Dexterity</b>	damage for some weapons, physical accuracy
<b>Agility</b>	physical evasion
<b>Speed</b>	initiative
<b>Vitality</b>	maximum HP
<b>Stamina</b>	HP regen from Charge Up actions, inherent physical armor
<b>Intellect</b>	magical damage, magical accuracy
<b>Wisdom</b>	healing power
<b>Mind</b>	maximum MP, magical evasion
<b>Spirit</b>	MP regen from Charge Up actions, inherent magical armor
<b>Tenacity</b>	maximum TP
<b>Determination</b>	TP charge from Charge Up actions, as well as passive TP gain

You start with 100 Battle Attribute Points, and gain 100 more with each Experience Level. Thus, your total number of Battle Attribute Points will be equal to Experience Level \* 100.

No one battle attribute can have more than triple the number of points as another battle attribute. For example, if you have

allocated 900 points to Strength, then all your other battle attributes must have at least 300 points allocated to them.

## Statistics

Civil Stats	Explanation
Gathering	Reserved by crafting items, increased through Job Levels in Disciples of the Land
Perception	Reserved by crafting High-Quality items, increased through Job Levels in Disciples of the Land
Craftsmanship	Reserved by crafting items, increased through Job Levels in Disciples of the Hand
Control	Reserved by crafting High-Quality items, increased through Job Levels in Disciples of the Hand

Combat Stats	Formula	Explanation
<b>Health Points (HP)</b>	$100 + (\text{LVL} * \text{Vitality})$	How much punishment you can take before dying. When your current HP reaches 0 or less, you are dead.
<b>Magic Points (MP)</b>	$100 + (\text{LVL} * \text{Mind})$	How much magical energy you have for performing various magical techniques. If you die, your current MP are also sent to zero.
<b>Technique Points (TP)</b>	$100 + (\text{LVL} * \text{Tenacity})$	How much battle technique energy you can hold during combat. After any amount of rest, your current TP are sent to zero. If you die, your current TP are also sent to zero.
<b>Physical Accuracy (P-Acc)</b>	$\text{LVL} + \text{Dexterity}$	Your skill at performing physical attacks. If your P-Acc is high enough then you will have a chance of performing Critical Hits. If your P-Acc is too low then you will perform Glancing Hits, or even start missing.
<b>Physical Evasion (P-Eva)</b>	$\text{LVL} + \text{Agility}$	Your skill at avoiding physical attacks. If your P-Eva is high enough then you will receive Glancing Hits instead of Direct Hits, or even avoid attacks entirely. If your P-Eva is too low then you will have a chance of receiving Critical Hits.
<b>Physical Defense (P-Def)</b>	$10 + (\text{LVL} * \text{Vitality} * 0.1)$	Resistance to physical damage. If your P-Def is high enough then your HP will go quite far.

Combat Stats	Formula	Explanation
<b>Magical Accuracy (M-Acc)</b>	LVL + Intellect	Your skill at aiming magical attacks. If your P-Acc is high enough then you will have a chance of performing Critical Hits. If your M-Acc is too low then you will perform Glancing Hits, or even start missing.
<b>Magical Evasion (M-Eva)</b>	LVL + Mind	Your skill at disappearing from magic attacks. If your M-Eva is high enough then you will receive Glancing Hits instead of Direct Hits, or even avoid attacks entirely. If your M-Eva is too low then you will have a chance of receiving Critical Hits.
<b>Magical Defense (M-Def)</b>	$10 + (\text{LVL} * \text{Spirit} * 0.1)$	Resistance to magical damage. If your M-Def is high enough then your HP will go quite far.
<b>Weight Capacity</b>	LVL + Strength	In general, the more Weight you have above your capacity, the slower you act, and consequently the more susceptible to interruption.

## Initiative Roll

Initiative Roll =  $1d100 + \text{Experience Level} + \text{Speed} - \text{Excess Weight}$

If Excess Weight is too high then you will end up suffering from Charge Time on every single round.

## Jobs

Jobs are magical concepts that confer supernatural abilities to whoever wears them. They magically-alter your clothing and other superficial traits to fit. For example, if you change into the Red Mage Job, you will suddenly have a red feathered hat and cape.

### Starting Civilian Jobs

Choose two different Civilian Jobs to start at Job Level 20. All other Civilian Jobs are initially unlearned.

### Starting Combat Jobs

Chemist, Freelancer and Squire start at Job Level 1. Then, choose either Chemist or Squire to start at Job Level 10 instead.

## Starting Items and Equipment

1 full set of gathering gear of Item Level 1

1 full set of crafting gear of Item Level 1

Your choice of combat job to start at Job Level 10 determines which of the following sets you get:

- a. Chemist set = 1H Dagger and full set of Magic armor, all at Item Level 1
- b. Squire set = 1H Sword and full set of War armor, all at Item Level 1

You do not need to maintain your starting items and equipment, but it is always at Item Level 1. Therefore you must start gathering and crafting, as well as cooperate with others, in order to have better stuff.

## Special Traits

All characters start with three Special Traits, and may potentially gain more, or change existing ones, according to the story.

**Awakening** - You have a number of rounds of Awakening energy equal to 1/10th of your Experience Level, rounded down, to a minimum of 1 round. You can spend an action to enter or cease Awakening. While in Awakening, your Strength, Vitality, and Agility are doubled. You refresh your Awakening energy after a Long Rest.

**Civilian Experience** - You start with ten different Civilian Jobs at Job Level 20, rather than two.

**Desperation Attack** - While your Current HP is less than one-fourth of your Maximum HP, your normal Attacks have a 10% chance to be a Desperation Attack instead. Desperation Attacks target all enemies, and are Direct Critical Hits.

**Job Training: Specific Job** - You start at Job Level 1 in one job of choice. You must meet its requirements to gain additional Job Levels in it. While wearing the Freelancer Job, you may have additional clothing and other superficial traits relating to your specially-trained job as well.

**Monster** - You can replace your body parts with those of defeated creatures. After every battle, you choose one part to put onto yourself. This part replaces one of your equipment slots, and in exchange, overrides one of your Battle Attributes with that creature's attribute number, or overrides one of your Statistics with that creature's statistic number. You can no longer wear equipment on that slot. You have access to one signature ability of that creature for each body part replaced.

**Morph** - You have a number of rounds of Morph energy equal to 1/10th of your Experience Level, rounded down, to a minimum of 1 round. You can spend an action to enter or cease Morph. While Morphed, your Strength, Intellect, and Spirit are doubled. You refresh your Morph energy after a long rest.

**Mystic** - One of your equipment slots is permanently replaced by a Mystic Body Part. You can bind up to three creatures to your Mystic Body Part, allowing you to tap into their Job experience or use their unique non-Job abilities. If binding a creature for its Job experience, then you specifically bind one of its Jobs, and gain access to the Job Level that the creature had. If binding a creature for its unique abilities, then you specifically bind one ability which you can then use at any time. In order to bind a creature, you must defeat it with a regular Attack action while also declaring that it is a Mystic Binding attempt.

**Robot** - Your Battle Attributes are halved. In exchange, your equipment increases your attributes, as follows:

Equipment	Robot Mod
Tool/Shield	Adds Weight to Agility & Mind
Head	Adds Weight to Wisdom & Spirit
Body	Adds Weight to Vitality & Stamina
Arms	Adds Weight to Dexterity & Tenacity
Legs	Adds Weight to Agility & Speed
Feet	Adds Weight to Mind & Speed
Ears	Adds Weight to Intellect & Determination
Weapon	Adds Weight * 2 to attribute of weapon's damage type

This is in addition to the other attribute & stat modifiers from equipment that would also affect non-robots.

**Two-Hour Ability** - Once per two hours, you can spend an action to activate your Two-Hour Ability. This cuts the MP and TP costs of actions from your current Job in half, for a duration of 4 status phases. This does not affect any other abilities you are capable of, only those from your current Job.

**Undead** - You permanently have Zombie status. In exchange, whenever you are defeated, you automatically pop up at 1 HP after 4 status phases.

## What Jobs Should I Aim For?

These paths are merely examples of the order in which to purchase Job Levels, which fit into typical combat roles. They are not necessarily the best for your current group, nor the best for your character's self actualization. Also keep in mind that, with enough playtime, it is possible to master every single Job in the game on one character.

Be aware that the party's need to craft gear and items may require you to spend JP on Civilian Jobs as well.

## Crafting

In FFP&P, crafting, maintenance, desynthesizing, etc. are all mashed together as just deciding what crafted items you maintain the existence of. You also do not have to maintain your starting equipment, although that is always at Item Level 1.

Maximum Item Level for items you craft is equal to whichever is lower from your Experience Level and relevant Job Level.

**Example:** You have an Experience Level of 20, and an Armorer Job Level of 15. In this case, the maximum Item Level you can craft for armor is 15.

Item Level reserves from the combined pool of Gathering & Craftsmanship

**High-Quality** items then reserve their Item Level from both Perception & Control separately. Therefore, on average, only half of your crafted items can be High-Quality. Such items function as if they were 5 Item Levels higher.

**Example:** You have a crafted item of Item Level 30. You can reserve 30 Gathering, 30 Craftsmanship, 15 Gathering and 15 Craftsmanship, or other combination. If you want to craft it as High-Quality, then you must additionally reserve both 30 Perception and 30 Control.

The same item can be crafted multiple times. Each time after the first reserves half as much of your crafting stats.

**Example:** You have crafted 7 items of the same type, of Item Level 20. This reserves 80 from your Gathering & Craftsmanship pool. If you want them all to be crafted at High-Quality then this additionally reserves 80 Perception and 80 Control.

## Goods Services And Usable Items

**Cooked Meals:** These apply their Item Level as a temporary attribute bonus to a single attribute, for all allies. The effects last until the next long rest. They must be crafted.

## Rules

### Short Rests and Long Rests

Short rests are any kind of rest that can be had outside of a time-sensitive situation. As long as you are not being chased, chasing someone else, in the middle of driving, or any other such scenario, you can probably fit in a short rest.

Long rests take long enough to potentially result in long-term problems. They have been classically defined as 8-hour sleeps or breaks, but could be longer or shorter according to the story's stakes.

Both types of rest set your current TP to 0.

### Rewards Per Game Session

One, two or three Experience Levels are given for every game session, depending on the pace of game that is desired.

For each Experience Level gained, characters also receive:

- 100 battle attribute points
- Flexible Job Points equal to new Experience Level \* 10. For example, a Level 1 character advancing to Level 2 will gain 20 JP. A Level 25 character advancing to Level 26 will gain 260 JP.

Once the maximum Experience Level is reached, further Game Sessions give a reward of 1,000 JP each.

An alternate way to view this is to determine your current Battle Attribute Points and flexible Job Points based solely on your Experience Level:

## Levelling Jobs

The cost to learn a new Job is 100 JP. Different game groups may have additional requirements, such as needing to learn from a specific Job Trainer, or needing to find Job Crystals.

The cost to improve a Job Level is equal to its current Job Level - for example, it costs 1 JP to improve from Job Level 1 to 2. It costs 55 JP to improve from Job Level 55 to 56.

An alternate way to view this is to calculate Job Level in terms of the total amount of JP spent on the job:

Using this view - If you have spent 1,000 JP on a Job, then it is at Job Level 42. If you have spent 2,000 JP on a Job, then it is at Job Level 62. The Chemist, Freelancer and Squire Jobs as well as chosen Civilian Jobs would implicitly have at least 100 JP spent on each of them to begin with. Any jobs starting at Job Level 10 would implicitly start with 145 JP spent on them.

## Learning New Jobs

The first Job Level of any Job can be learned for 100 JP, if you meet the requirements.

Game groups can add more restrictions on learning new Jobs depending on their game world:

- A set of Jobs may be sealed within the Wind Crystal of the world, and cannot be learned until the player team journeys to that crystal and defeats its guardian.
- Every single job may be sealed within its own unique Dress Sphere. Consequently, each Dress Sphere must be discovered.
- Jobs may be sealed behind a formal training procedure. Each Job Trainer lives in a different major city, and the player team must study under such Job Trainers for a period of time before gaining their first Job Levels.

Whichever restrictions are chosen for learning new Jobs, they must be used consistently for the whole group in perpetuity, as mixing methods will inflict severe inequality.

## Changing Jobs

You can change your current Job during a Long Rest.

Game groups may choose to add additional methods of changing Jobs which make sense for their game world:

- Jobs are socketed into special Job grids. Job grids must be equipped. Characters have an additional action in combat to change their Job, but it must always be a change from their current one to a linked one on their currently-equipped grid.
- Jobs can be changed at any time, except during dramatic situations and combat.
- Jobs are determined entirely by your current weapon. Therefore, you can change jobs simply by changing your weapon, but this could potentially result in de-equipping all of your armor instantly, and therefore is inadvisable during combat.

Whichever methods of changing Jobs are chosen, they must be used consistently for the whole game group.

## Skill Chances

Skill Chance = The sum of all relevant Job Levels. If your current Job is relevant then your Skill is a minimum of 50.

Use two ten-sided dice. Choose one die to be the tens place, and the other die to be the ones place. It is recommended that the two dice are different colors, or that one of them has explicit multiples-of-ten markings. Roll the dice. A roll with 10 on both dice is considered 100.

Failure does not halt progress. Instead, it means a disadvantageous path to progress.

**Example:** The Player-Characters are examining a scene for clues about what really happened. Several of the Player-Characters are not currently using relevant Jobs, so their chances to get clues are low. They have a variety of options to get clues via other means:

- Need to get more information from a shady broker. This then results in difficult sidequests.
- Spend extra time to gather clues. But this gives the enemy enough time to bring a hit squad to the scene, who the party must then fight.
- One of the characters must remember a painful and traumatic event, because that event was similar to the current scene under examination. They must literally fight against an enemy, solo, within their flashback.

**Example:** The Player-Characters are running away from an overwhelming enemy force. One of the Player-Characters fails their Skill check. That character has a variety of options that do not halt the story, but are certainly challenging:

- Captured, has to fight solo through the enemy prison, but has an opportunity to steal some key documents on the way out.
- Falls into a hole in the ground, has to fight solo through some special sewer enemies, but rejoins the rest of the party at the end.
- The party stops to help the lost character. As a consequence, the enemy is able to bring out a powerful and challenging boss.

## Combat Rules

1. Initiative Phase
2. Movement And Actions Phase
3. Status Phase

### Initiative Phase

Initiative Roll =  $1d100 + \text{Experience Level} + \text{Speed} - \text{Excess Weight}$

If you have leftover Charge Time and Cast Time from previous rounds, then you pay those down with your Initiative. Extreme amounts of Charge Time and Cast Time could result in effectively losing multiple turns.

### Movement And Actions Phase

**Charge Time:** Subtracted from your Initiative, then your action occurs at your new Initiative. If this results in negative Initiative then you will carry over the remaining Charge Time to the next round. Status conditions that would prevent you from starting the action will also interrupt you and make you lose the action.

**Cast Time:** Similar Charge Time, except that abilities with Cast Time have the option of targeting either a unit or a position/square. If targeting a unit, then even when that unit moves out of range during the Cast Time, the ability still occurs, centered on that unit. If targeting a position/square, then even if you move or are forcibly moved out of range during the Cast Time, the ability still occurs, centered on that position/square.

## Movement

**Mapless** You may spend Maneuver together with an Attack in order to aim at the target's Flank or Rear. It costs 2 Maneuver to aim at the Flank, and 4 Maneuver to aim at the Rear.

Conversely, when you are being targeted, you can spend Maneuver to block such attempts. It costs the same amount of Maneuver that the attacker spent to target you: 2 Maneuver to stop an attempt at your Flank, and 4 Maneuver to stop an attempt at your Rear. You can also spend 2 Maneuver to change a Rear attack against you into merely a Flank attack.

You can also spend 3 Maneuver to move from your party's front row to the back row, or to move from back to front.

**Map** You can choose to Move either before or after your Action.

Movement and range are determined by square-side-to-square-side. Movement between corners is not possible. Each square of travel uses 1 horizontal movement.

At the end of both your move and your action, you choose which square side to face.

## Attack

Accuracy	Type of Hit
Double Evasion or more	Direct Critical Hit
150% to Double Evasion	Direct Hit
75% to 150% Evasion	Normal Hit
Half to 75% Evasion	Glancing Hit
Half Evasion or less	Miss

Example at 100 Evasion

Evasion	Accuracy	Type of Hit
100	200 or more	Direct Critical Hit
100	150 to 199	Direct Hit
100	75 to 149	Normal Hit
100	50 to 74	Glancing Hit
100	0 to 49	Miss

Flank attacks ignore 25% of the target's Eva. Rear attacks ignore half of the target's Eva.

Any ability that ignores Acc or Eva is automatically a *Normal Hit*.

- **Direct Critical Hit:** Critical Hit, with a 10% chance to be a Devastating Hit. A Devastating Hit does triple After-Armor damage rather than double.
- **Direct Hit:** 10% chance to be a Critical Hit. A Critical Hit does double After-Armor damage, and any harmful status effects of the attack have their durations increased by two status phases.
- **Normal Hit:** Nothing special.
- **Glancing Hit:** After-Armor damage is halved. Harmful status effects have their durations capped to 1 status phase, even

if they normally do not have a finite duration. Instant-death is changed to an amount of damage equal to 10% of the target's maximum HP.

- **Miss:** The attack has no effect on the target.

Doing any amount of damage from a regular Attack action restores an amount of TP equal to your Determination.

Damage is resolved as follows:

1. Calculate initial damage. Because no dice are involved, some of this can be pre-calculated. And without any other modifiers or status conditions in play, you may have this initial damage number already.
2. Subtract the target's armor - either P-Def or M-Def, according to the nature of the attack.
3. Now you have the After-Armor Damage number. Subtract that from the target's HP.

**Gravity/Death Attacks** Gravity/Death attacks automatically have their Accuracy Class decreased by 1. They are consequently unable to do Direct Critical Hits.

Plot Armor Enemies decrease the Accuracy Class by 1 more, so they cannot take Direct Hits from Gravity/Death attacks. Furthermore, they halve all damage from Gravity/Death attacks. Instant death is converted to an amount of damage equal to 10% of maximum HP.

## Default

You enter a defensive stance until your next turn. Your P-Eva, P-Def, M-Eva, and M-Def are all increased by 50% from your front.

Also restores HP, MP and TP to yourself as follows:

- HP restoration = Stamina
- MP restoration =  $1 + (\text{Spirit} * 0.1)$
- TP restoration = Determination

## Item

Uses an item in order to apply its effect.

In map combat, you normally can only use an item on a square-side-adjacent target.

## Status Phase

First, everyone regains an amount of TP equal to  $1 + (\text{Determination} * 0.1)$ .

Then, resolve all status conditions.

At the end of the status phase, decrement the duration of all statuses that have any defined duration. Resolve any effects that come from status expiration.

Plot Armor Enemies take 1/4th damage from all status conditions that are based on maximum HP.

## Status Conditions

**Status: Addle**

You are unable to do anything that has a TP cost, Charge Time or Cast Time.

Plot Armor Enemies instead need to pay double the TP costs, Charge Times and Cast Times.

**Status: Advice**

Your accuracy class is improved by 1 for your next technique that would be altered by this. After that technique, you lose this status.

**Status: Anatman**

You are in a stable stance in which status conditions do not count down or expire in duration. Taking any action will end *Anatman*.

**Status: Windburnga**

Causes Air-aspected damage during the status phase. The damage is equal to 15% of your maximum HP.

**Status: X-Zone**

You are plane-shifted into the Void. If you remove this status, or have the means to cast X-Zone on yourself, you are highly unlikely to end up back in the same time and place as you were before being afflicted with this status.

Plot Armor Enemies instead take an amount of damage equal to 10% of their maximum HP, and end this status afterwards.

**Status: Zombie**

You are undead. This results in healing & reviving abilities causing damage to you, rather than helping you. On the other hand, the effect of Drain-Aspected damage against you is reversed.

**Special Points****Auto-Cure Points**

Upon taking damage, if you are still alive, then Auto-Cure Points are spent to restore your HP.

## **Doom Points**

When you have 4 Doom Points, you die and lose all Doom Points.

Plot Armor Enemies instead take an amount of damage equal to 10% of their maximum HP, then end *Doom* status.

## **Enmity**

For the purposes of random enemy targeting, you are considered an additional number of targets equal to your Enmity Points. For example, if you have 5 Enmity Points, then you are considered 6 targets. You lose one Enmity Point during the Status Phase.

In map combat, you are also considered a number of squares closer to the enemy equal to your Enmity Points, compared to your party members. This could possibly cause an enemy to disengage from a party member who is only a few squares away to chase you instead.

In mapless combat, if you are not in the front row, then you lose four Enmity Points during the Status Phase instead.

## **Fish Counter**

Used for Festivalist fish abilities. Adding more fish to a target results in relevant abilities doing more damage to that target.

## **Shield Points**

Damage is taken from your Shield Points before your HP. During the Status Phase, your Shield Points are halved.

## Arithmeticks

### Arithmetician 1 Calculate

Cost	Mapless	Map
TP: Variable	Variable	Ranged Indirect Variable

You use one **Geometric Dimension** and one **Numerological Pattern** to cast a Magick spell. You must currently have that spell available through one of your current Action choices. If it has both a single-target and multi-target form, then you use the single-target form, except its targeting is according to *Calculate*.

### Geometric Dimension: Initiative

Cost
TP: 100

Target all on the battlefield whose Initiative fits the Numerological Pattern.

### Numerological Pattern: Primes

Cost
TP: 101

Target all on the battlefield whose Geometric Dimension is a prime number greater than 1.

### Arithmetician 10 Geometric Dimension: Experience Level

Cost
TP: 200

Target all on the battlefield whose Level fits the Numerological Pattern.

**Arithmetician 20   Numerological Pattern: Multiple of 5**

Cost
TP: 125

Target all on the battlefield whose Geometric Dimension is a whole number multiple of 5.

**Arithmetician 30   Geometric Dimension: Height**

Cost
TP: 300

In map combat, target all on the battlefield whose current elevation fits the Numerological Pattern.

**Geometric Dimension: Row Position**

Cost
TP: 300

In mapless combat, target all on the battlefield whose current row position from the top fits the Numerological Pattern. The topmost position is considered “1”. This makes it highly likely that both allies and enemies will be targeted, unless there are a large number of enemies per row.

**Arithmetician 40   Numerological Pattern: Multiple of 4**

Cost
TP: 256

Target all on the battlefield whose Geometric Dimension is a whole number multiple of 4.

**Arithmetician 50   Geometric Dimension: Row**

Cost
TP: 400

In mapless combat, target all on the battlefield whose current row fits the Numerological Pattern. The back row of the party is “1”, the front row of the party is “2” and the front row of the enemies is “3”.

**Geometric Dimension: X-Axis**

Cost
TP: 400

In map combat, target all on the battlefield whose current X-coordinate fits the Numerological Pattern.

**Geometric Dimension: Y-Axis**

Cost
TP: 400

In map combat, target all on the battlefield whose current X-coordinate fits the Numerological Pattern.

**Arithmetician 60 Numerological Pattern: Multiple of 3**

Cost
TP: 729

Target all on the battlefield whose Geometric Dimension is a whole number multiple of 3.

**Arithmetician 70 Geometric Dimension: Current HP**

Cost
TP: 500

Target all on the battlefield whose current HP fits the Numerological Pattern.

**Geometric Dimension: Current MP**

Cost
TP: 500

Target all on the battlefield whose current MP fits the Numerological Pattern.

**Geometric Dimension: Current TP**

Cost
TP: 500

Target all on the battlefield whose current TP fits the Numerological Pattern.

**Arithmetician 80 Numerological Pattern: Multiple of 2**

Cost
TP: 1,024

Target all on the battlefield whose Geometric Dimension is a whole number multiple of 2.

**Arithmetician 90 Geometric Dimension: Not**

Cost
TP: 500

Combine with another *Geometric Dimension* to result in the opposite of that dimension. For example, “Not Initiative” will target all on the battlefield whose Initiative does not fit the Numerological Pattern. The TP costs stack.

**Numerological Pattern: Not**

Cost
TP: 500

Combine with another *Numerological Pattern* to result in the opposite of that pattern. For example, “Not Primes” will target all on the battlefield whose Geometric Dimension is not a prime number and not 1. The TP costs stack.

**Arithmetician 99 Precise Calculation**

Cost
Limit Break

Perform a Magick action, targeting whoever you choose on the battlefield. It cannot be a Limit Break itself. Ignore the MP cost and Cast Time.

**Astrologian**

### Gambler 90 Chocobo Race Jockeying

Cost
Special

Consumes an amount of item charges totalling 25 Gathering or Craftsmanship. Play the Chocobo Race Betting system, except that you personally ride on your chosen chocobo, improving chances by an additive 10%. For example, if you choose the 20% odds, then your chances become 30%. If you have mastered the Chocobo Knight job then your chances are improved by an additional 10%. In either case, you are banned from betting against yourself.

### Dollar Slots

Cost
Special

Consumes an amount of item charges totalling 25 Gathering or Craftsmanship. Play the Slot Machine. All three rows and both diagonals are used. The center row also uses the *High Power Effects* rather than the *Normal Power Effects*. You choose one of the five results.

### Mahjong Hand

Cost
Special

Consumes an amount of item charges totalling 200 Gathering or Craftsmanship. Play a solitaire game of Mahjong, according to Japanese Riichi rules, and attempt to form a hand with only 29 draws. On a failure to make a Mahjong, the whole party loses 20,000 HP, MP and TP. On a success, do an amount of Magical Unaspected damage to all enemies equal to ten times the points value of the hand, ignoring M-Eva and M-Def. The Special Mahjong Effects from your winning hand also take effect.

### Gambler 99 Full Banner Pull

Perform a Gambling action, except that you choose the exact result. The result must still be possible within the rules of the game, e.g. no more than 4 of the same Mahjong tiles, repeated cards depend on the number of decks used, etc.

### Slot Machine

There are three reels, with each reel having three positions. This is a total of 9 random positions.

pos	pos	pos
1	2	3
4	5	6
7	8	9

- Top Row: 1, 2, and 3
- Center Row: 4, 5, and 6
- Bottom Row: 7, 8, and 9
- Forward Diagonal: 7, 5, and 3
- Back Diagonal: 1, 5, and 9

Each position is determined by a roll of 1d8:

1. Diamond
2. Chocobo
3. Airship
4. Dragon
5. Cait Sith
6. Moogles
7. BAR
8. Lucky Seven

### Normal Power Effects

- Any other combination: Lagomorph (whole party): Restores Level \* Wisdom \* 0.1 HP, and ends Blind, Poison and Sleep statuses.

- 3 Lucky Sevens: Game Over (all enemies): Magical technique that attempts to instantly-kill each enemy at double M-Acc. This is a Gravity/Death attack.

### Chocobo Race Betting

Make a bet, then roll 1d100 to see if your bet wins. If your bet loses, then your action is wasted.

- 75% chance to win (self-only): Grants yourself Regen status.
- 50% chance to win (one enemy): Attack, and ignore P-Eva.
- 40% chance to win (one enemy): Attack, and ignore P-Eva and P-Def. Win a Chocobo, which must then be collected from a casino.
- 30% chance to win (one enemy): Attack for double damage, ignoring P-Eva and P-Def. Win a Blue Chocobo, which must then be collected from a casino.
- 20% chance to win (all enemies): Magical Attack, Unaspected, targeting all enemies on the battlefield for Level \* Intellect \* 1.2 damage. Win a Red Chocobo, which must then be collected from a casino.
- 10% chance to win (all enemies): Magical Attack, Unaspected, targeting all enemies on the battlefield for Level \* Intellect \* 1.6 damage. Win a Black Chocobo, which must then be collected from a casino.

- 5% chance to win (whole party): Restores Level \* Spirit \* 0.6 MP and Level \* Determination \* 0.6 TP to the whole party. Win a Golden Chocobo, which must then be collected from a casino.

Direct participation as a jockey adds to odds by 10%. If doing so, then having Chocobo Knight mastered will further add to your odds by 10%, for a total of 20%. In either case, you are banned from betting against yourself.
